

**IN THE ABSTRACT:**

Please substitute the attached new Abstract shown below.

A method of opening a tray of an optical disc changer that includes a plurality of disc mounting recesses, on each of which a disc can be loaded, the method including moving two disc mounting recesses to a position that is exposed so that discs can be simultaneously mounted on the recesses when the tray is opened if a tray open command to mount two discs substantially simultaneously is input by a user, and opening the tray and a method of reproducing data on discs in an optical disc changer which is suitable for a tray open mode that enables two discs to be mounted simultaneously, the method including determining whether discs are mounted on pre-selected disc mounting recesses, reproducing a first disc having higher priority when whether discs are mounted on the selected two disc mounting recesses is determined, and reproducing a second disc when the reproduction of the first disc is completed.
